JAKARTA FIBER OPTIC CITY

Connecting cities to the world

Biznet InterCity Network provides connectivity between major cities located in Indonesia. These cities are connected with high capacity Fiber Optic Network Infrastructure to support data, voice and video transmission.

Features of Biznet InterCity Network:

- Approximately 250 KM intercity route in Indonesia and growing
- Directly connected with Biznet Metro Ethernet and Biznet Metro FTTH Network
- Diverse with no single points of failure
- Multi-conduit, high-fiber-count infrastructure
- Ability to access more than 100 on-net buildings
- Convenient and easy interconnection options

WELCOME LETTER

It is inevitable how computer technology development has given significant impact to information system and the lives of worldwide society. One of the major developments is the emergence of fiber optic technology.

Fiber optic technology has given great impact to our communication system because of its reliability and compatibility. In this Digital Era, every industry has realized the use of Fiber Optic as an important element or backbone in their system.

Biznet understands the demand of better telecommunication service in Jakarta no longer necessity, but it is the ultimate requirement. Biznet has built extensive fiber optic route in Jakarta CBD and expanding the coverage area to the surrounding area. Hopefully with this development speed, all of Jakarta area will have fiber optic access by year 2012.

The expensive cost of Internet service has become the main problem of low penetration rate of Internet. Besides expanding more coverage area, Biznet has a commitment to deliver affordable Internet service so more people can use Internet for greater use. Internet can be used for education, business and entertainment.

Starting 1 June 2008, Biznet has lowered Biznet MetroNET's service price up to 50 percent. Biznet MetroNET 512 Kbps is only Rp.1,000,000/month, with available speed up to 5 Mbps for Rp.7,500,000/month. During 2008 Promotion Period, every month Biznet MetroNET's new or upgrading customers can get the chance to win 4 iPod Nano and 1 unit LCD TV 32".

Not just for business users, the need of a reliable Internet service has been a growing demand in personal communications as well. For home and apartment use, Biznet provides MAX3 Internet the fastest broadband internet service in Indonesia with speed up to 10 Mbps. MAX3 is available in several new areas like Cipete Utara, Permata Hijau, Kemang, Melawai, Cilandak, Sunter Jaya, Mangga Dua and others.

Biznet has opened 2 (two) MAX3 Store located in Pluit and Kemang for you to experience the fastest Internet service in Indonesia. At MAX3 Store you can sign up or buy Top Up Voucher for your MAX3 Prepaid Account.

Thank you for your continuous support and trust you have given to us. We will continue to grow and create new innovations as our dedications to our customer and to provide the next generation of Fiber Optic Network in Indonesia.

Warm Regards,

Adi Kusma
President Director
adi_kusma@biznetnetworks.com

JAKARTA

FIBER OPTIC CITY

Jakarta as one of the metropolitan city has been growing fast since last economic crisis in year 1998. New construction of office towers, apartments and malls scattered around the city. Every year more people migrating from other smaller city to find better fortune and opportunity. To support better living, Jakarta needs better infrastructure such as road, highway, water, sewage and of course telecommunication. The demand of better telecommunication service and technology has become necessity for every Jakarta's residence for doing business and communicate with friends and family.

Biznet Networks as one the leading telecom operator in Jakarta has built extensive fiber optic network throughout Jakarta CBD (Central Business District), now has been extended to cover major route in Jabodetabek (Jakarta Bogor Depok Tangerang Bekasi) area. By end of 2008, Biznet will have total route of approximately 850 KM including **Biznet InterCity Network** that span between Serang and Bandung.

Biznet Metro FTTH (Fiber To The Home) Network has enable residential and apartment users to tap into the most advanced telecommunication network in Jakarta. With coverage around 20 area (Kelurahan) and further expansion in progress, Biznet Metro FTTH Network will deliver Internet speed of light and future digital entertainment to the home. MAX3 Internet and MAX3 Phone can be used today, in the future MAX3 TV, an IPTV platform will be available for Jakarta's residence. Make sure you have Biznet network at your office and home to untap the future digital world.

Fiber Optic Benefit

Long distance signal transmission. The low attenuation and superior signal integrity found in optical systems allow much longer intervals of signal transmission than metallic-based systems. While single-line, voice-grade copper systems longer than a couple of kilometers require in-line signal repeaters for satisfactory performance, it is not unusual for optical systems to go over 100 kilometers (km), or about 62 miles, with no active or passive processing.

Large bandwidth, light weight, and small diameter. While today's applications require an ever-increasing amount of bandwidth, it is important to consider the space constraints of many end-users. It is commonplace to install new cabling within existing duct systems. The relatively small diameter and light weight of optical cables makes such installations easy and practical, and saves valuable conduit space in these environments.

Long lengths. Long, continuous lengths also provide advantages for installers and end-users. Small diameters make it practical to manufacture and install much longer lengths than for metallic cables: twelve-kilometer (12 km) continuous optical cable lengths are common. Multimode cable lengths can be 4 km or more, although most standards require a maximum length of 2 km or less. Multimode cable lengths are based on industry demand.

Easy installation and upgrades. Long lengths make optical cable installation much easier and less expensive. Optical fiber cables can be installed with the same equipment that is used to install copper and coaxial cables, with some modifications due to the small size and limited pull tension and bend radius of optical cables. Optical cables can typically be installed in duct systems in spans of 6000 meters or more depending on the duct's condition, layout of the duct system, and installation technique. The longer cables can be coiled at an intermediate point and pulled farther into the duct system as necessary.

Non-conductivity. Another advantage of optical fibers is their dielectric nature. Since optical fiber has no metallic components, it can be installed in areas with electromagnetic interference (EMI), including radio frequency interference (RFI). Areas with high EMI include utility lines, power-carrying lines, and railroad tracks. All-dielectric cables are also ideal for areas of high lightning-strike incidence.

Security. Unlike metallic-based systems, the dielectric nature of optical fiber makes it impossible to remotely detect the signal being transmitted within the cable. The signal in a fiber can, however, be "tapped" by bending the fiber and detecting light that then leaks from its core. The resistance to remote signal interception makes fiber attractive to governmental bodies, banks, and others with security concerns.

Designed for future applications' needs. Fiber optics is affordable today, as electronics prices fall and optical cable pricing remains low. In many cases, fiber solutions are less costly than copper. As bandwidth demands increase rapidly with technological advances, fiber will continue to play a vital role in the long-term success of telecommunications.

With those benefits, fiber optic has been the choice by many telecom operators and enterprises for their core and mission critical network to transmit voice, data, internet and video. Wireless radio network has benefit of fast network deployment, but when network needs performance and reliability, fiber optic is the only choice.

MAX3 Store is coming closer near you

To improve MAX3's customer satisfaction, Biznet has launched a store called MAX3 Store. This store was designed by TWS & Partners, a renowned local Interior Designer who is behind many hospitality projects in Jakarta and Bali. Adopting a futuristic concept, MAX3 Store is available in Pluit, Sudirman and Kemang area. We estimates around 5 more stores will be coming near you within this year.

As you already know, MAX3 is part of a triple play service that consists of Internet, Phone and TV. MAX3 Store is the perfect place to experience a digital lifestyle. At MAX3 Store, our trained Store Specialist will be more than happy to show you our wide variety of services, and explain to you how to use the services. You can also sign up instantly, make payment and purchase Top Up voucher, broadband routers, IP Phone, network cable and many more. Please come and experience it yourself. See you soon.

MAX3 Store Kemang

Jl. Kemang Raya No. 31
 Jakarta Selatan

KNOW OUR STAFF

Setyo Budi Nugroho

Research & Development Engineer

setyo_budi_nugroho@biznetnetworks.com

Setyo Budi Nugroho graduated in 1993 from Sahid Academy and joined Biznet in the year 2004 as the Customer Care. Having a different background education is not an issue for Nugi and with the urge to learn and a lot of experience, Nugi has proved himself to be a dedicated employee. In 2006, Nugi has been assigned as the Research & Development Engineer. He is the person in charge for integrating

Biznet Prepaid System, including Redback BRAS (Broadband Remote Access Server) and Crestel Billing System. Nugi is responsible for the billing prepaid development and trouble shooter for any prepaid customer's problem.

Nugi has a huge interest in photography and during weekend he likes to go to unique places to get beautiful pictures. Nugi also has a different hobby which is collecting miniature train models around the world.

As one of Biznet employees, Nugi hopes Biznet will continue to create great innovations and in the future Biznet will become the new generation of Telecommunication Provider with an excellence service to customers.

Protect the Computer, then Connect to the Internet

If a friend is getting their first computer, offer to help them set it up and protect it. If you are getting a new machine, be ready. Do not just plug it in, turn it on, and surf the web. You need to take certain steps first, to make sure your computer stays safe from spyware, adware, trojans and viruses.

Get your toolkit ready ahead of time -- either commercial CDs or files on a CD that you burn to take to the new computer. Even if you aren't getting a new computer, go ahead and download some of the free programs, burn them to a CDROM and be ready to help your newbie friends.

I recommend the following types of security programs be installed before you connect to the Internet the first time:

1. Firewall Program. I suggest the Sunbelt Personal Firewall.
2. Anti-Virus Program. The new computer may come with a trial version. Most trials now are only good for 90 days. If you do not plan to continue running that antivirus program, buy the one that you will use BEFORE you get the computer.
3. Anti-Spyware Program. This program should run all the time, monitoring the computer for the changes that adware and spyware make. The anti-spyware program should also be able to do a full scan of your computer upon request. When it finds adware and spyware, it will recommend an action. Sometimes that action is "Ignore" -- decide for yourself.
4. Anti-Spam Program. As soon as you get an email account, you will start getting spam. No way around it. So, you need something that filters the spam so that you don't have to read it or see the images that might be embedded in it.
5. A safer web browser. Internet Explorer has become well known, not only as the most widely used web browser, but

also as the target of choice for all the bad guys who want to infect you with adware, spyware, trojans and other malware. With that many people searching, serious security holes keep being found. You can save yourself a lot of grief by using one of the other free web browsers such as Opera or Firefox.

Your first stop on the Internet needs to be Windows Updates. The easiest way to do this is click on the Start Button, hover over All Programs, and click on Windows Updates. Your computer may show the new Microsoft Update, which is an even better option for your updates. Do them now to install the patches that Microsoft has issued for known security holes in Windows.

Your second stop is to update your anti-virus program signatures. This will cover you for the viruses and some other beasts that try to arrive via your email.

With this preparation behind you, now you can surf, send email and all the rest of the fun that comes with the Internet!
